

# AFM SAFECOAT

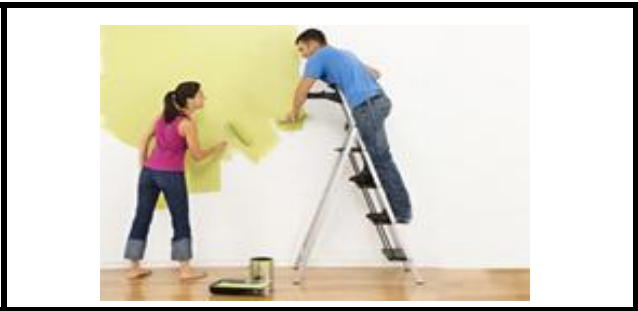

Planet Hardwood is a stocking distributor of AFM Safecoat, a manufacturer of a wide range of paints, finishes, cleaning and maintenance products. Safecoat is dedicated to providing for the safest, most toxic-free environments using the highest quality, most highly refined materials available. Their products have been proven in use by everyone from homeowners to hospitals. People who want to avoid or can't tolerate toxic chemicals have used their products for over 25 years. Others report fewer sick days, increased productivity, better concentration and increased vigor. The focus of the EPA is on the chemicals that cause outdoor air pollution. Many of these pollutants are Volatile Organic Compounds (VOC's), which means that they are chemically unstable. They turn into gas or combine with other chemicals... then you breathe them. Not all VOC's are harmful to people. The EPA only defines VOC's harmful to people as those that contribute to outdoor smog, so even chemicals as toxic as acetone (nail polish remover) can be included in "zero VOC" products. All the major paint manufacturers and big box private labels produce millions of gallons of earth-harmful and people-harmful products. Safecoat goes beyond the simplistic "sound bite" advertising with a deeper commitment to people who are chemically sensitive or environmentally ill. Indoor air pollution can be 10 times worse than Los Angeles on a bad day... even here in Vermont!

## Some of the great things about Safecoat:

<b>Beautiful Paints</b>	Safecoat comes in a wide variety of colors and finishes.
<b>State-of-the-art Unique Products</b>	Safecoat makes unique products designed with a unique molecular formulation to seal surfaces (from wood to metal to concrete, carpets, and much more), thus reducing off-gassing from products like carpet, carpet padding and plywood.
<b>Environmental Integrity</b>	Safecoat's was originally formulated for physicians to meet the needs of chemically sensitive patients <b>25 years ago</b> , well before indoor air pollution was recognized as a problem.
<b>Wood Protection</b>	Protect and beautify wooden surfaces in your home with Safecoat's line of sustainable, plant-based, organically produced finishes. 100% pure, they contain no solvents or toxic ingredients such as harmful preservatives, dryers or other irritants that can contribute to poor indoor air quality or negative health consequences.
