

TIMBERSIL DECKING - SAFE FOR CHILDREN

TimberSil is the next generation of pressure treated Southern Yellow Pine with properties that are nearly miraculous. Instead of impregnating the lumber with a mix of nasty chemicals and heavy metals, TimberSil is treated at very high heat with sodium silicate, which is glass. It is totally non-toxic and can't leach its preservative into the ground like other treated materials can, even when soaked with water for long periods of time. And, while TimberSil is totally harmless to people and animals, bugs and micro-organisms have no interest in eating it. The company says you can grind up a TimberSil 2x6, drop it in a termite mound for a century, then come back to find the pieces right where you left them. That's good stuff.

Some of the great things about TimberSil:

| | |
|------------------------------|---|
| Beautiful | TimberSil does not change the appearance of the wood. |
| Durable | TimberSil carries a 40 - year direct ground contact warranty |
| Non-Corrosive | No need for expensive fasteners and hardware. TimberSil is non-corrosive to metal. |
| Non-Toxic | TimberSil is a unique combination of wood and glass. It does not expose people to dangerous chemicals, leaves no toxic trail in production, or leach any matter into the environment. |
| Environmental | TimberSil uses plantation grown wood in a premium grade. |
| Hardness and Strength | The TimberSil treatment nearly doubles the hardness of the Southern Yellow Pine and makes the wood stiffer and stronger. |
| Fire Retardant: | TimberSil has a Class A fire rating |
| Versatile | TimberSil can be used wherever pressure treated lumber is employed, even raised beds for gardening, docks and wharfs, and decks. |
